**2. Methodology to determine the percentage of Profitable Accounts and Unprofitable Accounts.**

To determine whether an Account is profitable during a quarter, we calculate the sum of Realised Profits, Realised Losses and Unrealised Profits or Losses for all CFD Trades placed on an Account, net of fees, Commissions, interest income, and any other charges or income. All Accounts for which our calculations result in a positive number are considered profitable (“**Profitable Accounts**”). Conversely, all Accounts for which our calculations result in a negative number or zero are considered not profitable (“**Unprofitable Accounts**”).

For the purpose of determining whether Accounts are profitable or unprofitable, we exclude from our calculations deposits and withdrawals of funds from Accounts during the quarter. We only include in our calculations Accounts on which at least one transaction was executed or that had at least one open Position during the quarter.

The percentage of Profitable Accounts and Unprofitable Accounts is calculated on a quarterly basis for the periods listed below, which are based on our fiscal year ending on March 31<sup>st</sup> of each year:

- Q1: 1 April to 30 June;
- Q2: 1 July to 30 September;
- Q3: 1 October to 31 December;
- Q4: 1 January to 31 March.
